

1] What is the function of the DROP command in SQL?

Ans:

Function of the DROP Command in SQL

Definition:

The DROP command in SQL is used to delete an existing database object, such as a table, database, index, or view. When you use the DROP command, the specified object is permanently removed from the database, including all of its data and structure.

Common Uses of the DROP Command:

1. Dropping a Table: The **DROP TABLE** command removes the entire table from the database, including all the rows and the table structure.

```
DROP TABLE table_name;
```

2. Dropping a Database: The **DROP DATABASE** command removes the entire database, including all tables, views, and other objects within the database.

```
DROP DATABASE database_name;
```
