

2] Explain the use of the ORDER BY and WHERE clauses in SQL queries.

Ans:

The ORDER BY and WHERE Clauses in SQL Queries

1. The WHERE Clause

The WHERE clause is used to filter records that meet specific conditions in SQL queries. It allows you to retrieve only the rows that match certain criteria.

Syntax:

```
SELECT column1, column2, ...  
FROM table_name  
WHERE condition;
```

2. The ORDER BY Clause

The ORDER BY clause is used to sort the result set of a query in either ascending (default) or descending order based on one or more columns.

Syntax:

```
SELECT column1, column2, ...  
FROM table_name  
ORDER BY column1 [ASC|DESC], column2 [ASC|DESC], ...;
```
